Art Unit: 1772

1. Applicant's election with traverse of Group I in Paper No. 6 is acknowledged.

The traversal is on the ground(s) that the search and examination can be made without serious burden. This is not found persuasive because the search for Group II requires searching in an area not required to be searched for Group I.

The requirement is still deemed proper and is therefore made FINAL.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-3 and 6-8 are rejected under 35 U.S.C. 102(b) as being anticipated by the Japanese patent document ('388). See the Abstract, and Figures 2 and 5. The plastic material described in the reference is considered to inherently be thermoplastic since it is capable of being softened by heating and hardened by cooling. Since the "certain temperature" referred to in claims 1 and 6 may be any temperature, any thermoplastic material will meet the "configuration at a temperature ..." limitation in claims 1 and 6.

4. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Hall. See column 2, lines 44-47. The handle 12 is made from PVC pipe which is inherently thermoplastic and may be considered adapted for holding a material. Since the "certain temperature" referred to in claims 1 and 6 may be any temperature, any thermoplastic material will meet the "configuration at a temperature ..." limitation in claims 1 and 6.

5. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by the Japanese patent document ('690). See the Abstract, and Figures 2 and 5. The plastic material described in the reference is considered to inherently be thermoplastic since it is capable of being softened by heating and hardened by cooling. Since the "certain temperature" referred to in claims 1 and 6 may be any temperature, any thermoplastic material will meet the "configuration at a temperature ..." limitation in claims 1 and 6.
